sfrclak.com malware and command-and-control campaign

Report ID: TIBLENDER-RUN-252a5d11fa1a
Generated At: 2026-09-16T08:49:00Z
Severity: HIGH
Category: malware

Executive Summary

6 post(s) from discord, reddit and x posted on 2026-03-31 were consolidated into one malware and command-and-control cluster across 3 platform(s), rated CRITICAL. The cluster carries 1 domain, 2 file hashes. Matched threat vocabulary: malware, payload, npm. This summary is composed from the cluster’s indicators, counts and vocabulary matches; the source posts are quoted under source evidence in the language they were posted in.

Key Findings

- Infrastructure
- Infrastructure focus selection used the heuristic planner (no LLM agent configured).
- Infrastructure agent investigated domain_registration_and_whois, dns_and_passive_dns_analysis, ssl_tls_certificate_analysis with 5 tool query/queries (5 successful).
- Infrastructure agent pivoted one level into 2 newly discovered indicator query/queries.
- Technical
- Technical focus selection used the heuristic planner (no LLM agent configured).
- Technical agent investigated technical_intelligence_and_security_report_collection, cve_exploitation_analysis with 2 tool query/queries (2 successful).
- Social
- Social focus selection used the heuristic planner (no LLM agent configured).
- Social agent investigated sns_account_abuse_and_spread_tracking, social_engineering_tactics_analysis with 4 tool query/queries (4 successful).
- Actor
- Actor focus selection used the heuristic planner (no LLM agent configured).
- Actor agent investigated apt_group_and_threat_actor_investigation, cybercrime_group_and_market_analysis, campaign_tracking with 5 tool query/queries (5 successful).
- Indicators
- Extracted from the cluster’s posts: 1 domain, 2 file hashes.
- Severity CRITICAL across 3 platform(s).

2026-03-31T14:56:44Z	reddit source post sample-reddit-axios-0002	Primary source evidence used for clustering and report generation.

Recommendations

Immediate

1. Block or monitor the listed domains, URLs and IP addresses according to local policy. The cluster carries network indicators that can be actioned directly.
2. Add the listed file hashes to endpoint blocklists and hunt for prior executions. File hashes in the cluster identify the delivered sample.
3. Search SIEM and EDR telemetry for the listed indicators and the associated campaign terms. Retrospective search establishes whether the campaign already reached the estate.

Short-Term

1. Preserve the source evidence and re-run enrichment if new platform posts appear in the next cycle. Evidence is credible but the cluster is still developing.

Source Evidence

- sample-discord-axios-0001 (discord, 2026-03-31T07:54:11Z): Malware signal: Discord incident channel is treating the Axios npm compromise as one campaign across x, reddit, and discord evidence. The affected package versions, sfrclak[.]com payload host, and payload hashes are linked to the same malicious postinstall activity. IoCs: sfrclak.com
- sample-reddit-axios-0001 (reddit, 2026-03-31T13:53:00Z): Malware signal: Reddit triage thread for the Axios npm compromise confirms this is not a simple typosquat. The same sfrclak[.]com payload host, malicious postinstall behavior, and affected versions axios@1.14.1 / axios@0.30.4 are listed as one supply-chain campaign. IoCs: sfrclak.com
- sample-reddit-axios-0002 (reddit, 2026-03-31T14:56:44Z): Other signal: Axios supply-chain response notes: audit CI runners and developer workstations that installed axios@1.14.1, axios@0.30.4, or plain-crypto-js@4.2.1. Known indicators include sfrclak[.]com, f7d335205b8d7b20208fb3ef93ee6dc817905dc3ae0c10a0b164f4e7d07121cd, and 92ff08773995ebc8d55ec4. IoCs: 92ff08773995ebc8d55ec4b8e1a225d0d1e51efa4ef88b8849d0071230c9645a f7d335205b8d7b20208fb3ef93ee6dc817905dc3ae0c10a0b164f4e7d07121cd sfrclak.com
- sample-x-axios-0001 (x, 2026-03-31T03:20:27Z): Malware signal: Axios npm supply-chain compromise: affected packages include axios@1.14.1, axios@0.30.4, and plain-crypto-js@4.2.1. The active payload host sfrclak[.]com is being shared for CI and developer workstation hunting. IoCs: sfrclak.com
- sample-x-axios-0002 (x, 2026-03-31T04:22:49Z): Malware signal: Additional Axios campaign triage links the same malicious npm postinstall flow to sfrclak[.]com. Reported payload hashes are f7d335205b8d7b20208fb3ef93ee6dc817905dc3ae0c10a0b164f4e7d07121cd and 92ff08773995ebc8d55ec4b8e1a225d0d1e51efa4ef88b8849d0071230c9645a. IoCs: 92ff08773995ebc8d55ec4b8e1a225d0d1e51efa4ef88b8849d0071230c9645a f7d335205b8d7b20208fb3ef93ee6dc817905dc3ae0c10a0b164f4e7d07121cd sfrclak.com
- sample-x-axios-0003 (x, 2026-03-31T04:52:56Z): Malware signal: Axios incident update: the malicious npm postinstall path contacts sfrclak[.]com after users install affected package versions. Hunt for axios@1.14.1, axios@0.30.4, plain-crypto-js@4.2.1, and the two payload hashes already circulating in the thread. IoCs: sfrclak.com
